

LAB ASSIGNMENT-2

Title: Household Power Consumption Analysis

- Measurements of electric power consumption in one household with a one-minute sampling rate over a period of almost 4 years.

Objective: The objective of this lab assignment is to explore and analyze a dataset containing measurements of electric power consumption in a household over a period of almost 4 years. You will perform various data visualization tasks to gain insights into electrical quantities, sub-metering values, and overall trends.

Task:

- 1) Load the data
- 2) Detect outlier, missing value from the data.
- 3) Subset the data from the given dates (December 2006 and November 2009)
- 4) Create a histogram
- 5) Create a Time series
- 6) Create a plot for sub metering
- 7) Create multiple plots, such as, Scatterplot, Histogram, Bar Chart, Pie Chart, Count plot, Boxplot, Heatmap, Distplot, Jointplot

Which visualization techniques shows optimum visualization

Submission:

Prepare a PDF file that covers all the tasks mentioned above. Include code snippets, visualizations, and tables to support your analysis. Clearly explain the steps you took, the results you obtained, and your interpretation of the findings.
